

TASK 1 – PYTHON AUTOMATION FILE ORGANIZER

Project Type: Python Automation

Repository: python-automation-file-organizer

1. Objective

The objective of this project is to automate file organization using Python. The program identifies files according to their file type and organizes them into appropriate folders, reducing manual effort and keeping files organized.

2. Technologies Used

Technology	Purpose
Python	Programming and automation
File-handling modules	Working with files and folders
File extensions	Identifying file types

3. Working Process

1. The program accesses the selected directory.
2. It reads the files present in the directory.
3. It checks each file's extension/type.
4. It creates or identifies suitable folders for different file types.
5. It moves the files into their corresponding folders automatically.

4. Example

Before: A folder contains mixed PDF, image, document and Python files.

After: Files are grouped into suitable folders according to their types.

5. Result

The Python automation project successfully demonstrates automated file management. It reduces manual work and keeps files organized.

6. Conclusion

This task provided practical experience with Python automation, file handling, folders, conditions and basic scripting. The project can be extended to support additional file types.
